

360°

360° is a 3rd generation primer which can be used on sub optimally prepared concrete or even metal surfaces. Its unique formulations is solvent free, low viscosity ensures strong adhesion by free flowing penetrating and interlock with microscopic undulations in surfaces, thus giving a strong bond.

360° has diverse application but most popular one being the base primer for industrial flooring and metal tank linings.

■ USPs

- 360° is a clear primer for concrete substrates. Can be used on wooden surfaces as a protective coat which increases the life of wood. 3rd generation primer that even works on concrete which has minor traces of moisture as well as oil.
- Special additives ensures low viscosity and thus high penetration that results in a strong bond with the surface with micro interlocking.
- Ideal as base coat for epoxy flooring, tank linings.
- Solvent free.
