

Black Shield

Black Shield is a coal tar based epoxy system that is an excellent solution for extreme water proofing applications. Epoxy aids in strong adhesion and coal tar gives Black Shield strong hydrophobic (water repelling) properties.

Black shield can be especially used for waterproofing of sub soil structures, MS or concrete structures of bridges, sewage treatment plants, effluent treatment plants, bathroom floors etc.

■ USPs ■

- Strong hydrophobic properties and chemical resistance. Ideal for effluent treatment tanks, STP etc.
- Prevents growth of plant roots, algae and water by forming impermeable layer around concrete. Ideal for sub-soil structures.
- Long lasting solution in extreme water / moisture percolation environments
